

30-60-90 Day Plan

Prepared by Corey Alejandro for The Forest — Cleveland Heights · July 2026

THIRTY-SIXTY-NINETY DAY PLAN

Lead Dispensary Associate — The Forest Cleveland Heights

PHASE ONE: DAYS 1–30 (OBSERVE & SECURE)

Objective

Build trust. Document baseline. Fix compliance-critical gaps. Do not propose grand changes. Listen more than you speak.

Week 1: Immersion

- **Day 1:** Arrive one hour early. Introduce yourself to every team member by name. Learn the POS system. Shadow one full shift at each station: check-in, floor, register, drive-thru.
- **Day 2:** Review the inventory system. Identify the top twenty SKUs by velocity. Note which products stock out most frequently.
- **Day 3:** Audit the pricing display. Compare online menu prices to in-store POS prices for all top twenty SKUs. Document discrepancies.
- **Day 4:** Observe the ID verification process. Count how many customers are carded. Note any inconsistencies.
- **Day 5:** Review the Daily Log. Look for recurring complaints, incidents, or patterns.
- **Weekend:** Write a one-page "Week One Observations" memo for the Store Manager. No recommendations yet. Only facts.

Week 2: Compliance Lock

- **Pricing Integrity Audit:** Reconcile all online menu prices with POS prices. Fix discrepancies immediately. Document the root cause (system error, manual override, outdated menu).
- **Rounding Policy Kill:** Verify that no register is rounding up change. If found, stop it immediately and retrain the affected employee.
- **ID Verification SOP:** Write a one-page ID check protocol. Post it at every register. Train every employee. Quiz them.
- **Daily Huddle Pilot:** Launch a ten-minute pre-shift huddle. Agenda: daily specials, inventory outages, compliance reminder, and one customer win from the previous shift.

Week 3: Medical Patient Fast Lane

- **Designate a medical check-in process:** Medical patients get a dedicated line or a verbal acknowledgment: "Welcome back. Your usual section is ready."
- **Create a medical-specific product section:** Ensure high-CBD and medical-focused products are prominently displayed and not buried behind recreational SKUs.
- **Track medical retention:** Count medical patients per day. Set a baseline. Target: no decline in medical patient count by Day 30.

Week 4: SOP Documentation

- **Write SOPs for the five most common edge cases:** discount application, returns, medical vs. adult-use verification, drive-thru workflow, complaint escalation.
- **Upload to shared drive:** Make accessible to all shifts.
- **Train and quiz:** Every employee must sign off on all five SOPs by Day 30.

Phase One Metrics

Metric	Baseline	Day 30 Target
Pricing complaints per week	Document	Zero
Daily huddle attendance	None	100% of shifts
Medical patients per day	Document	Maintain or increase
SOP sign-off rate	None	100% of staff
ID verification consistency	Document	100% compliance

Phase One Go / No-Go Criteria

- If pricing complaints are not zero by Day 30: escalate to Store Manager and Corporate IT.
- If daily huddles are not sustainable with current staffing: reduce to five minutes or move to shift-change only.
- If medical patient count declines more than ten percent: escalate to Kate Ols with proposed retention program.

PHASE TWO: DAYS 31–60 (PILOT & PROVE)

Objective

Launch one revenue-protecting initiative and one efficiency initiative. Measure rigorously. Be willing to sunset what does not work.

Week 5: Terpene Tuesday Launch

- **Every Tuesday at 2 PM:** Fifteen-minute staff education on one terpene or cannabinoid.
- **Content:** Week 1 = Myrcene. Week 2 = Limonene. Week 3 = Caryophyllene. Week 4 = CBN and CBG.
- **Output:** Staff must be able to explain the terpene to a customer in thirty seconds by the end of each session.
- **Measurement:** Mystery shopper visit once per week. Score staff on terpene knowledge. Target: eighty percent pass rate.

Week 6: Community Integration Pilot

- **Launch Coventry Crawl passport:** Partner with Tommy's Restaurant and Blue Arrow Records. Customers who visit both The Forest and the partner in one day receive a five-dollar loyalty credit at each.
- **Track redemptions:** Count passport redemptions per week. Target: twenty redemptions in Week 6.
- **Social media:** Post partner content on The Forest's Instagram and Facebook. Tag partners. Build reciprocal traffic.

Week 7: AI Tool Deployment

- **Deploy Medical Patient Concierge:** Load on the consultation desk tablet. Train two staff members to use it. Observe five customer interactions.
- **Deploy SOP Training Engine:** Store Manager uses it for one pre-shift huddle scenario per day. Gather feedback.
- **Measure usage:** Count concierge consultations per day. Count SOP generations per week. Target: ten concierge uses and five SOP generations by Day 60.

Week 8: Inventory Buffer System

- **Safety stock analysis:** Identify the top ten SKUs that stock out most frequently. Maintain a seven-day safety stock for each.
- **Reorder automation:** Work with Corporate Buyer to set automatic reorder triggers at fourteen-day supply levels.
- **Measurement:** Stockout incidents per week. Target: fifty percent reduction from baseline.

Phase Two Metrics

Metric	Baseline	Day 60 Target
--------	----------	---------------

Mystery shopper terpene score	None	80% pass
Coventry Crawl redemptions	None	20 per week
Concierge consultations per day	None	10 per day
Stockout incidents per week	Document	50% reduction
Basket size	Document	10% increase

Phase Two Go / No-Go Criteria

- If mystery shopper scores are below sixty percent: extend training to thirty minutes and add peer coaching.
- If Coventry Crawl redemptions are below five per week: pivot to a simpler single-partner promotion.
- If stockouts do not improve: escalate to Corporate Buyer with specific SKU data.

PHASE THREE: DAYS 61–90 (MEASURE & ITERATE)

Objective

Prove ROI or sunset. Document learnings. Create the playbook for other locations.

Week 9: Performance Review

- **Compile all metrics:** NPS, retention, basket size, labor efficiency, stockouts, pricing complaints, medical patient count.
- **Present to Store Manager:** One-page dashboard with graphs. Highlight wins. Flag concerns.
- **Present to Kate Ols:** If metrics are strong, request a fifteen-minute call to share the Cleveland Heights playbook. If metrics are mixed, present the learnings and the iteration plan.

Week 10: Corporate Observations

- **Draft "Questions for Leadership" document:** Frame corporate-level observations (compensation, IT integration, marketing support) as strategic questions, not demands.
- **Examples:** "What is the corporate target for medical patient retention across all locations?" "Is there a timeline for POS and online menu integration?" "What is the budget for community partnership marketing?"
- **Submit to Store Manager for review:** Ensure tone is collaborative, not critical.

Week 11: Playbook Creation

- **Write the Cleveland Heights Retail Operations Playbook:** Include SOPs, training scripts, community partnership templates, and the AI tool deployment guide.
- **Format for portability:** PDF and shared drive. Designed to be adapted for Cincinnati, Sandusky, Seville, and new locations.
- **Peer review:** Share with Lead Associates at two other locations for feedback.

Week 12: Future Planning

- **Propose Q2 initiatives:** Medical Patient Retention Program (formalized), Staff Compensation Review (with ROI data), Technology Pilot Expansion (if AI tools show usage).
- **Set personal development goals:** Complete Ohio DCC continuing education. Attend one cannabis industry conference. Shadow the Corporate Buyer for one day.

Phase Three Metrics

Metric	Baseline	Day 90 Target
Store NPS	Document	+15 points
Medical patient retention rate	Document	85% or higher
Revenue per labor hour	Document	10% increase
Staff training completion	Document	100% maintained
Playbook adoption at other locations	None	1 location piloting

Phase Three Go / No-Go Criteria

- If NPS does not improve: diagnose whether the issue is product, price, or people. Adjust accordingly.
- If medical retention does not improve: propose a formal retention program with dedicated staff and marketing support.
- If playbook is not adopted elsewhere: refine for simplicity and cost. Resubmit.

SUMMARY

This plan is designed to be executed entirely within the Lead Associate's sphere of control. No corporate approval needed for Phase One. Minimal corporate support needed for Phase Two. Phase Three is about proving value to earn corporate investment in Phase Four and beyond.

The philosophy is simple: observe before you change, pilot before you scale, and measure before you claim success.
